

Azure terraform pet project made by Valeriy Manuilyk review document

Розпочинаємо наш проект зі створення гіт-хаб репозиторія:

The screenshot shows the GitHub 'Create a new repository' page. The form includes fields for 'Owner' (BlessedXd), 'Repository name' (azure_terraform), and a 'Description' (Automate Azure infrastructure deployment using Terraform and GitHub Actions). It also has options for 'Public' or 'Private' visibility, 'Initialize this repository with' (Add a README file, .gitignore template: Terraform), and 'Choose a license' (MIT License). A green 'Create repository' button is at the bottom right.

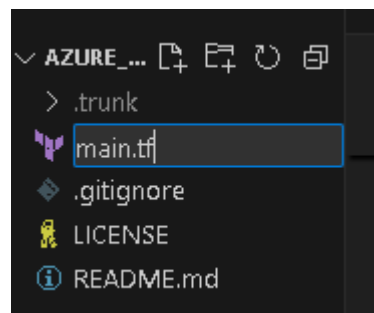

Додаємо опис, обираємо відповідні ліцензії, у моєму випадку я обрав -

MIT License:

- **Опис:** Дуже популярна ліцензія, яка дозволяє іншим використовувати, змінювати та розповсюджувати ваш код з мінімальними обмеженнями.
- **Кому підходить:** Якщо ви хочете, щоб інші мали максимальну свободу з вашим кодом, включно з можливістю комерційного використання.
- **Простота:** Легка у розумінні та застосуванні.

Так само обрав шаблон для Terraform .gitignore

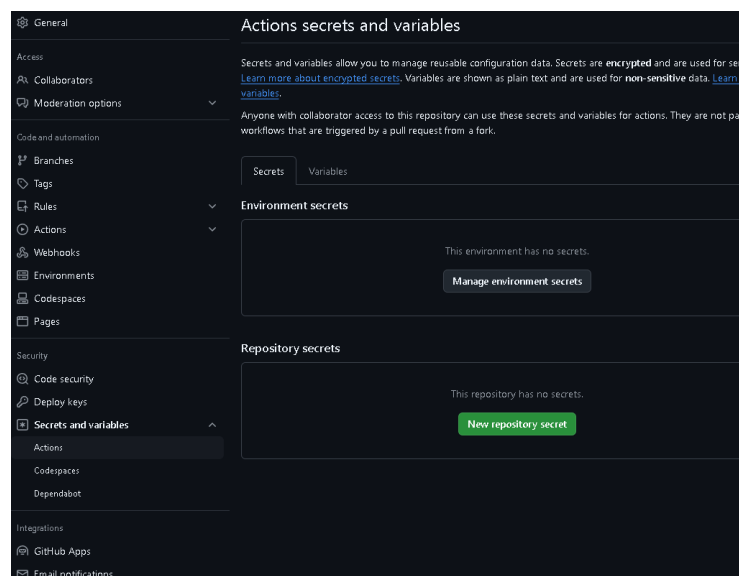

Починаємо створювати структуру проекту:

Передньо заплановано створити щось типу такого:

```
project-root/  
├── main.tf           # Main file to call modules  
├── variables.tf      # Variables definition  
├── outputs.tf        # Outputs for resources  
├── terraform.tfvars  # Variable values  
├── .github/  
│   └── workflows/  
│       └── terraform.yml # GitHub Actions workflow  
└── modules/  
    ├── app_service/  
    ├── acr/  
    ├── key_vault/  
    ├── sql_database/  
    ├── storage_account/  
    └── vnet/
```

Так як ми хочемо наш код синхронізувати з github actions , нам потрібно додати Secret до нашого репозиторію

Зрозумів що не маю можливості зробити модулями
вирішив скористатись максимально примітивним варіантом

```
user@Helper ➤ ~/azure_finaly ➤ main ➤ tree  
.  
├── LICENSE  
├── README.md  
├── main.tf  
├── outputs.tf  
└── variables.tf
```

Було прийнято рішення

Написати все в одному файлі

Результат алпая:

Warning: Deprecated Resource

```
with azurerm_app_service_plan.valeriy777_plan,  
on main.tf line 53, in resource "azurerm_app_service_plan" "valeriy777_plan":  
53: resource "azurerm_app_service_plan" "valeriy777_plan" {
```

The 'azurerm_app_service_plan' resource has been superseded by the 'azurerm_service_plan' resource. The 'azurerm_app_service_plan' resource will continue to be available in the 2.x and 3.x releases of Terraform but it is feature-frozen and will no longer receive any updates and will be removed in a future major release of Terraform.

(and 3 more similar warnings elsewhere)

Apply complete! Resources: 25 added, 0 changed, 0 destroyed.

Outputs:

```
app_service_default_hostname = "valeriy777567567567567567456app.azurewebsites.net"  
sql_server_fqdn = "tfvaleriy777sqlserver.database.windows.net"  
storage_account_primary_key = <sensitive>  
user@Helper ~/azure_terraform_broken |
```

Manage keys and secrets used by apps and services

Our recommendation is to use a vault per application per environment (Development, Pre-Production and Production). This helps you to not share secrets across environments and also reduces the threat in case of a breach.

Control access to key vault

Enable logging and set up alerts

Turn on recovery options
